PLANIKA 2017

WORLD'S LEADER IN BIOETHANOL FIREPLACES

AUTOMATIC FIREPLACES

BEV
technology

The Automatic Line of Planika fireplaces is based on the most advanced solution available on the market – the patented BEV Technology (*Burning Ethanol Vapours*). It minimizes direct contact between flame and fuel and provides the cleanest combustion without any smoke, smell or ash. The technology ensures the longest possible burning time and always natural golden flames. We guarantee that our technology is the safest solution in the ethanol fireplace industry.

Automatic
refill system

Planika developed a unique system which eliminates the risk of human error during the refilling process. For your comfort, we equip our fireplaces with an automated solution - the entire process is computer-assisted, which means that it controls and delivers the necessary amount of fuel without any risk of spillage, leaks or overfilling. It is very effective and convenient, as the contact with the fuel is reduced to the minimum.

Smart device
control

To maximize comfort of use, Planika products offer a series of remote connection options to control different functions of the fireplace. Apart from the integrated control panel, you are free to choose between a convenient handheld remote or any smart devices connected via WiFi network. Our products also allow for Smart Home System connection, which additionally extends possible control solutions.

Extensive
customization

Planika wants to meet your individual needs, which is why we offer an extensive range of customization options, including custom length, corner solution and number of finishing options. We have a wide experience in developing bespoke solutions, offering unlimited customization possibilities. Our experts from the Project Department are waiting for your ideas and inspirations to create your ideal fireplace.

OUTDOOR FIREPLACES

Commerce
technology

An innovative solution based on highly absorbent ceramic fibers that keep the fuel inside the tank, eliminating any risk of spillage or leaks. Planika's outdoor fireplaces utilize bioethanol, a renewable and eco-friendly source of energy that provides the cleanest combustion without any smoke, smell or ash. Our solutions make the product fully portable and, more importantly, safe for use in outdoor spaces, even under heavy weather conditions.

OUTDOOR GAS FIREPLACES

LPG fuelled

Natural gas
fuelled

LPG or natural gas fuelled, weather-resistance, portable form and complex customization— these are the major benefits you get with our Galio products. Planika's outdoor gas fireplaces can be arranged and designed according to your specific needs. Also, the unique shape of the fireline (linear or campfire) creates a truly beautiful golden fire – all of this to make your outdoor space just perfect.
